STORAGE GUIDELINES

Cartridge Storage Conditions:

New cartridges are packaged in a 30% Calcium chloride / 5% Glycerin / water solution. The glycerin/water solution should be removed from new cartridges before their initial use with a water rinse. See the pre-startup cleaning instruction sheet packed with each cartridge shipment for more details. Prior to installation, cartridges should be stored in their original packaging under the following conditions:

- Indoors, out of direct sunlight.
- Temperatures between 50 - 85°F (10 - 30°C).
- Relative humidity below 70%.
- In a horizontal position (unless shipped as fully loaded crate).

It is best to use new cartridges within one year of shipment. Consult KSS for recommendations for longer term storage.

Used cartridges should be cleaned, rinsed, and impregnated before storage using a solution of 30% Calcium chloride / 5% Glycerin / water. New cartridge storage conditions should also be used for used cartridges. Used cartridges must be drained, rinsed, and cleaned after storage per the pre-startup cleaning instruction sheet.
